

Public Policy Briefing Hawaii Climate Summit October 14, 2014

"The arctic ice is in a runaway meltdown crisis which is the primary driver of catastrophic climate change all over the planet that is threatening our very existence... in a few decades, not a hundred years from now. The omission of this information from the IPCC report is leading governments into a false sense of security about the future of our planet." – Arctic Methane Emergency Group statement to the British Parliament, September, 2014.

Join our climate, science and economic experts to discuss this cutting edge independent science, the reality of the warning, the grave implications to Hawaii, and the new paradigm we face. Most people are unprepared for what they will hear. [Click here to register](#). Forward to contacts, post on lists, boards and walls, bring friends.

Hawaii State Capitol Auditorium
415 S Beretania St, Honolulu (Lower level)
Session 1 – 10:00 am to Noon
Session 2 – 7:00 to 9:00 pm

Please Carpool, but
obtain a complete parking
guide for the Capitol by
